

Coolant Care

Kubota HD Extended Life Coolant.

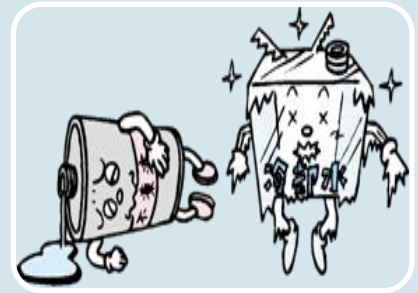

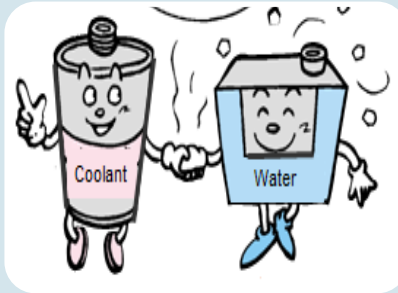

Keeping Your Cool

It is imperative that the **correct** coolant is used and it is well maintained to ensure long life from your radiator and other components.

Use the correct coolant specified by KUBOTA.

Service Tips

1. Never touch a hot cooling system (refer to your Operators manual).
2. Check the coolant level is properly maintained.
3. Never add cold water to a hot engine.
4. If coolant colour changes (replace it).
5. Replace coolant every 2 years or as per the service schedule.
6. Flush the system with good quality clean water.
7. Only use KUBOTA's HD Extended Life Coolant.
8. Mixing ratio 50%.
9. Check that the system is properly filled and that any air is removed.

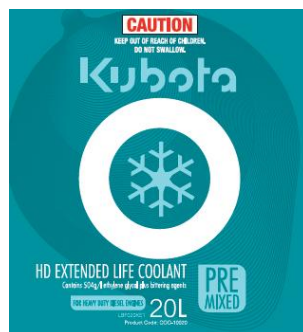

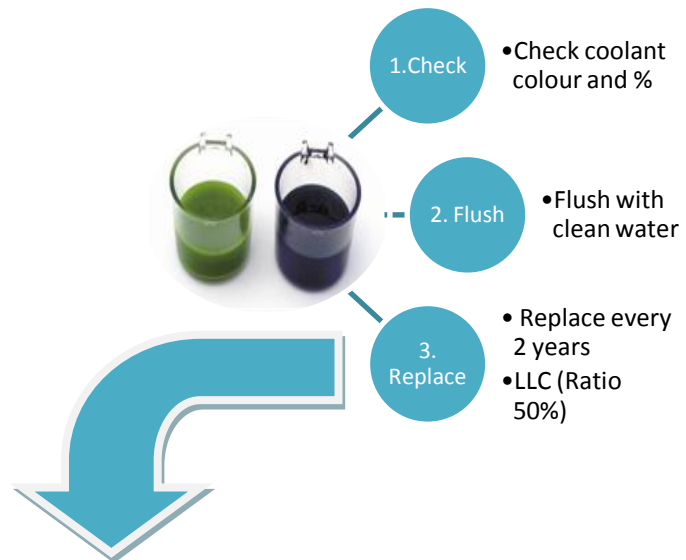

Coolant Care

- Don't mix different coolants.
- Use 50% Ethylene Glycol LLC (Long Life Coolant).
- Use good quality water.
- Flush old coolant out.
- Replace every 2 years.

Problems

- Use of the wrong coolant may cause corrosion.
- If mixing ratio between coolant & water is wrong (above 50%) engine damage will occur.

Only Use
Kubota Genuine
Extended Life Coolant
